

“Our centers consistently see excellent results with iLs with regard to attention and learning problems. iLs works at a neurological level so it’s a great complement to the behavioral, cognitive and medical approaches we use at Hallowell Centers... Even the best therapy only works if you actually stick with it, so the fact that iLs is not only effective, but is fun and can be done at home, makes it extremely appealing.”

Edward Hallowell, MD, Harvard Medical School faculty, child and adult psychiatrist, author and ADHD expert.

Dreampad™ Intrasound Technology

Calming music travels to the user’s internal ear from bone conductors embedded in the Dreampad™ pillow. The process stimulates the body to “rest and digest”. Helpful for relieving symptoms related to mental stress, trauma, sleep difficulties and anxiety stemming from sensitivity. Deep, refreshing sleep prepares the brain for learning and working.

How does iLS work?

iLS Listening Therapy programs effectively “re-trains” parts of the brain involved in learning, communication and movement. Combining an auditory program with specific visual and balance activities, iLS strengthens neurological pathways and improves our ability to learn and process sensory information.

iLS Total Focus System for Home Program use

What equipment do I need ?

Therapeutic music is delivered via a customised air and bone conduction system which includes:

- IPOD pre-loaded with 4 programs of high quality processed music
- Amplifier to power air and bone conduction headphones
- High quality headphones customised with bone conductor
- Balance board and visual tracking kit
- A “Playbook“ of therapeutic activities

Who can benefit?

iLS is proven to benefit persons with challenges in

- Learning skills: listening, reading, handwriting
- Cognitive skills: auditory processing, attention, concentration, and working memory
- Attention Deficit Hyperactive Disorder
- Autism Spectrum Disorders & Down Syndrome
- Stress, anxiety and sleep-related problems
- Behaviour, self-regulation & executive function
- Sensory integration and motor coordination
- Post-Traumatic Stress Disorder

How long is the Home program?

iLS programs customizable for the client's needs:

- 4 programs, 40-60 sessions each (188 hours +)
- Each session is 60 mins (or 2 x 30 min) a day
- Recommended frequency of 3-5 times a week
- Balance and visual tracking activities are integrated for 15-20 minutes each session
- Quiet activities for remaining listening time: puzzles, play, walking, drawing, swinging

Integration Kit includes a balance board, Playbook (visuals of activities), beans bags, and swing ball

Evidence Based Therapy

Cross-midline activities strengthen neurological pathways

iLS School Programs

Suitable for RTI Tier I through Tier III students:

- Rapid improvement in core functional skills, reducing long-term costs of remediation
- Includes staff training, support & equipment
- Flexible enough to fit with school's schedule
- 3 programs, 80 half hour sessions each, 4-5 times a week (completed in one semester)
- May be monitored by para-professionals
- Immediate replacement of equipment, if needed, and ongoing web-based training
- Includes access to secure online iLS **Measure of Foundational Abilities Portal:**
 - ◆ tracks child's progress in real time from measurable, valid data
 - ◆ gathers feedback from teachers, consultants, parents, EAs in 10 mins
 - ◆ produces progress reports for IEP reporting with graphics and visuals
